About Achilles Therapeutics

Achilles Therapeutics is a clinical stage, biopharmaceutical company developing precision T cell therapies targeting clonal neoantigens: protein markers unique to the individual that are expressed on the surface of every cancer cell. The Company has two ongoing Phase I/IIa trials, the CHIRON trial in patients with advanced non-small cell lung cancer (NSCLC) and the THETIS trial in patients with recurrent or metastatic melanoma. Achilles uses DNA sequencing data from each patient, together with the proprietary PELEUSTM bioinformatics platform, to identify clonal neoantigens specific to that patient, and then develop precision T cell-based therapies specifically targeting those clonal neoantigens.
